Patent Allowance Issued in Canada for Guardian™ PCAD System

Caylym® Technologies announces Notice of Allowance issued by Canadian Intellectual Property Office for Guardian™ System.

San Diego, CA April 29, 2010

Caylym® Technologies International is pleased to announce that the Canadian Intellectual Property Office has issued a Notice of Allowance with respect to the patent application for the Guardian™ System, a Precision Container Aerial Delivery System (PCADS).

The Guardian™ System solves the need for safe, responsive, and accurate nighttime aerial firefighting methods. By using the Guardian™ System, aerial firefighters can deploy fire extinguishing materials at safe and level flight profiles, therefore, providing the ability to perform day and night drops at higher altitudes. A multitude of common cargo-configured aircraft with rear ramps, both fixed-wing and rotary-wing, can deliver several Guardian™ units on various targets with GPS precise accuracy. Last September, Caylym completed the world's first C-130 PCADS drop at altitudes ranging from 500 to 1,500 feet.

Rick Goddard, Co-Founder of Caylym® commented, "We are very pleased with the progress being made toward commercializing the PCAD System internationally. Obviously, gaining protection on our intellectual property is an important step in the process, and we are also making excellent progress in our testing and product improvement efforts. The Guardian™ System has the potential to become an aerial firefighter's most effective tool for night-time containment and direct attack missions on wildfires. As a company that is addressing critical public safety needs, securing protection of our intellectual property will ensure night-time aerial firefighting is safe, accurate, effective and timely."

About Caylym®: Caylym® Technologies International is the developer of the patent-approved Guardian™ System, a Precision Container Aerial Delivery System (PCADS). The Guardian™ System enables any cargo configured aircraft with a rear loading ramp to safely deliver several 2,000 lb units of fire suppression or extinguishing materials 24 hours a day.
